Monthly Desert Locust Bulletin

issue 43

December 2009

INTRODUCTION

Monthly survey has been carried out by Empres link person on **31-12-2009-5/1/2010** how to know the desert locust condition in the plateau areas, the brooder areas, and the coastal areas in S/land from Maroodi-jeex(Hargeisa) Boorama (Awdal) down to Silil region and the brooder of Djibouti and Somaliland from the brooder Djibouti to Berbera to Biyogure, from Berbera to Burao to Goda Adaadley district .

Locust situation

During the survey no locust was found in the areas surveyed because there were no rains after 3/12/2009 besides that nomadic people recoated and settled the rainy areas those were carried huge livestock's grassed and disturbed the vegetations grown the whole coastal areas. So the ecological condition was not good for the locust in that month.

The Vegetation

The vegetation were dry with lack of rains and stressed grassed for that animals lived there in that month of December.

Soil moisture

The soil moisture was dry because there was no rains in that surveyed areas.

Forecasting

Now it is the suitable time locust breeding in the winter coastal breeding areas if the soil gets heavy dew or rains come back .So a conditions survey is necessary to carry out in every month.
